# 1 Introduction(Ad hoc analysis)

The ABC Company has composed the document to detail all the requirements of the potential HTA software applications who will be invited for bidding. It is essential for bidder to prepare a complete software application architecture design to win the bid. The application will include two main parts: essential part and desirable features. First, in essential part, the app will be designed for end-users, doctors and technician team members. All sorts of users can use functionalities such as 'Login', 'View all available functionalities', 'View functionalities descriptions and access', 'Health tracking', 'View health risks', 'View health recommendations and notifications', 'Track progress on health status', 'Contact to emergency'. Second, in desirable features, it will be divided into two parts: major features and minor features. The major features contain: 'Define types and range of the functionalities', 'Define personal information', 'Define the diagnosis and treatment information', 'Show available doctors, nurses, therapists, hospital and health centers', 'Define medical costs and possible savings methods', 'Personalized timetable (for end users and doctors)', 'Notify the users of important activities', 'Alert functionality'. Furthermore, the minor features will include: 'Discussion board', 'Finance Management' and 'Online e-Health System'.

## 2 Requirements

### 2.1 Login

The user should input username and the access code that gives access to his/her account, and click the access button to log into the Personal Health Assistant.

### 2.2 View all available functionalities

The end-users should click the 'menu' button to see all available functionalities. All available functionalities of this application should be shown on the screen.

### 2.3 View functionalities descriptions and access

At the functionalities view, the end-user could view the functionalities descriptions and get access to them by clicking the functionality name.

## **2.4 Health tracking**

End-users could view their health status and track it whenever they want and wherever they are by clicking the Health Tracking button on functionalities list.

## **2.5 View health risks**

End-users can view the current risks based on their body situation by clicking health risks button on functionalities list.

## **2.6 View health recommendations and notifications**

End-users can view the recommendation tasks according to the current body risks by clicking the recommendations tasks button on functionalities list.

## **2.7 Track progress on health status**

End-users can track their health status by clicking track health status button on functionalities list. A view will jump out to show the current status and comparing with previous health status.

## **2.8 Contact to emergency**

End-users can contact emergency health service or health center via the application by clicking the button 'Contact Emergency'. Once button clicked, the number of health service and health center will be shown on the screen to let users to select.

## **2.9 Publish announcement**

Doctor can publish information via the application, which can be viewed by all of the user of the application. The information could be warning, such as outbreak of flu and so on

## **2.10 View health status of end users**

Doctors can check patient's health status, which is the description of patient's current condition.

## **2.11 Notify patients**

After every examination, doctor can add new information into the patient's records (including health status, risk and recommendation)

## **2.12 Create a topic**

Doctors can create a topic in the discussion board for end user and doctor.

## **2.13 Post in discussion board**

Doctors can leave comments under the topic

|  |                                |
|--|--------------------------------|
| <b>UC1:</b> Create account for end users                           |                                |
| <b>Goal:</b> End users will get a new account                      |                                |
| <b>Level:</b> System   |                                |
| <b>Actor:</b> End-users  |                                |
| <b>Preconditions:</b> End user owns access code                    |                                |
| <b>Success Condition:</b> End user successfully creates an account |                                |
| <b>Failure Condition:</b> End users fail to create an account      |                                |
| <b>Trigger:</b> End users click “sign up” button                   |                                |
| <b>Success Scenario</b>  | 1. End users enter signup page |

|                   |   |
|-------------------|---|
|                   | 2. End users fill in personal information and access code<br>3. End users submit information to create a new account<br>4. Return to login page     |
| <b>Extensions</b> | 2.a Access code doesn't exist<br>2.b personal information doesn't are written in wrong format<br>3.a End users doesn't confirm to create an account |

Table 3.4.1 Use case for creating a new end user account

### 3.4.1.2 Login process for end users

The mock-up interface is a window titled "Window" with standard window controls (minimize, maximize, close) in the top right corner. The interface is set against a light blue grid background. It contains the following elements:

- A text label "user name" followed by a horizontal input field.
- A text label "password" followed by a horizontal input field.
- A text label "user type" followed by three radio button options: "end user", "doctor", and "technician".
- Two rectangular buttons at the bottom: "login" on the left and "sign up" on the right.

Figure 3.4.2 Mock-up interface for creating an account for a new end user

|  |
|--|
| <b>UC2:</b> Log in   |
| <b>Goal:</b> End-users log in                                    |
| <b>Level:</b> System   |
| <b>Actor:</b> End-users, users and technician                    |
| <b>Preconditions:</b> End-users already have an existing account |
| <b>Success Condition:</b> Users log in to the system             |

|   |   |
|---|---|
| <b>Failure Condition:</b> Users fail to log in. |   |
| <b>Trigger:</b> End-users click “login” button  |   |
| <b>Success Scenario</b>                         | 1. End users type in “user name” and “password”<br>2. End users click “login” button<br>3. End users pass the validation    |
| <b>Extensions</b>                               | 3.a End users type in the user name in wrong format<br>3.b The account doesn’t exist<br>3.c Username doesn’t match password |

Table 3.4.2 Use case for end users login process

### 3.4.1.3 View End-users Personal Profile

**Assumption:** End users have no need to fill in all information in the page of creating new account, such as let blood type blank at first. End users can modify these information through edit personal profile function.

The mock-up interface is a window titled "Window" with standard window controls (minimize, maximize, close). It features a sidebar on the left under the heading "Personal profile" with the following menu items: announcement, notification, discussion board, health status, emergency contact, function description, and logout. The main content area contains a form for editing personal information. The form has input fields for "first name", "last name", "age", "height", "weight", "bloodtype", and "genotype". A large curly bracket on the right side of these fields is labeled "changable information". At the bottom of the form is a "save" button.

Figure 3.4.3 Mock-up interface for viewing personal profile page

|  |
|--|
| <b>UC3:</b> View End-users Personal Profile      |
| <b>Goal:</b> End-users can view personal profile |

|   |   |
|---|---|
| <b>Level:</b> System  |   |
| <b>Actor:</b> End-users   |   |
| <b>Preconditions:</b> Users successfully log in   |   |
| <b>Success Condition:</b> Users can view their age, gender, weight, height, blood group and genotype. |   |
| <b>Failure Condition:</b> Users fail to view their details.   |   |
| <b>Trigger:</b> Users click “View Personal Information” button on the profile page                    |   |
| <b>Success Scenario</b>   | 1. Personal information used when signup appear |
| <b>Extensions</b>   | -   |

Table 3.4.3 Use case for viewing End-users Personal Profile

#### 3.4.1.4 Edit End-user Personal Profile

**Assumption:** End users only need to type in values for age, weight, height and choose a value from fixed values blood, such as blood type. End users can only choose A, B, AB or O.

|  |  |
|--|--|
| <b>UC4:</b> Edit End-user Personal Profile   |  |
| <b>Goal:</b> End-users can edit personal profile   |  |
| <b>Level:</b> System   |  |
| <b>Actor:</b> End-users  |  |
| <b>Preconditions:</b> Users successfully log in  |  |
| <b>Success Condition:</b> Users can edit their first name, last name, age, gender, weight, height, blood group and genotype and save |  |
| <b>Failure Condition:</b> Users fail to edit personal profile  |  |
| <b>Trigger:</b> Users click “save” button on the profile page  |  |
| <b>Success Scenario</b>  | 1. Users view personal details<br>2. Users edit information,<br>3. End users click “save” button |

|                   |  |
|-------------------|--|
| <b>Extensions</b> | 2.a End users cancel “edit” operation<br>3.a End users cancel “save” operation |
|-------------------|--|

| <b>Goal:</b> End-users view discussion board                              |  |
| <b>Level:</b> System  |  |
| <b>Actor:</b> End-users   |  |
| <b>Preconditions:</b> Users successfully log in                           |  |
| <b>Success Condition:</b> Users view a list of topics in discussion board |  |
| <b>Failure Condition:</b> End users fail to view topics                   |  |
| <b>Trigger:</b> Users click on the “discussion” button                    |  |
| <b>Success Scenario</b>   | <ol style="list-style-type: none"> <li>1. Users click on the “discussion board” button</li> <li>2. A list of topic shows up on the screen</li> <li>3. Click one item of the list</li> <li>4. View detailed notification</li> <li>5. Edit comments information</li> <li>6. Click “send” button to post</li> </ol> |
| <b>Extensions</b>   | -  |

Table 3.4.7 Use case for viewing discussion board

**Assumption:** Health status information can be gained from other applications, such as real-time health tracker, or information including heart beat and blood pressure that doctor offer to end users after an appointment.

### 3.4.1.8 View Health Status Information

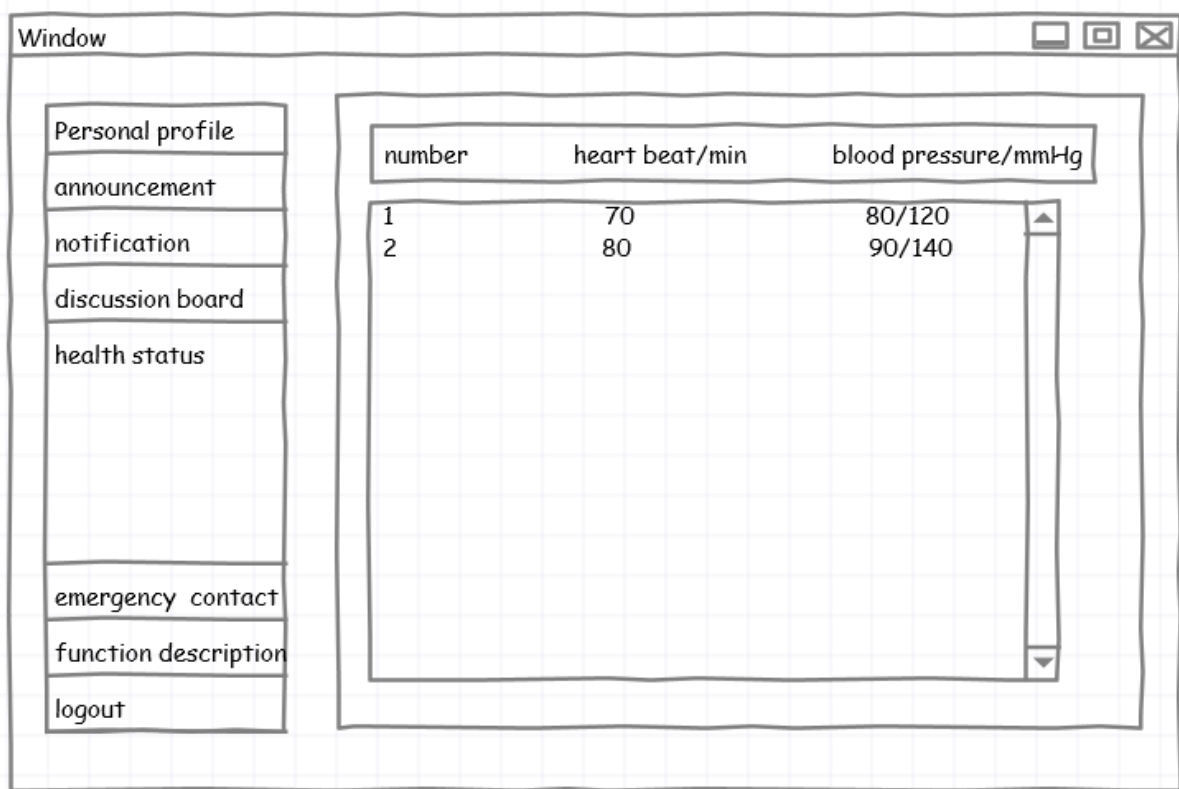

Figure 3.4.9 Mock-up interface for viewing notification page

|  |  |
|--|--|
| <b>UC8:</b> View Health Status Information                               |  |
| <b>Goal:</b> End-users can Health Status Information                     |  |
| <b>Level:</b> System   |  |
| <b>Actor:</b> End-users  |  |
| <b>Preconditions:</b> Users successfully log in                          |  |
| <b>Success Condition:</b> Users view a list of Health Status information |  |
| <b>Failure Condition:</b> Users unable to view Health Status information |  |
| <b>Trigger:</b> Users click on the “Health Status” button                |  |
| <b>Success Scenario</b>  | <ol style="list-style-type: none"> <li>1. Users click on the “Health Status” button</li> <li>2. Turn to Health Status information page</li> <li>3. A list of Health Status information shows up on the screen</li> </ol> |
| <b>Extensions</b>  | -  |

Table 3.4.8 Use case for viewing health status information

**Assumption:** Doctor offer an evaluation to end users against end users' current health status.

### 3.4.1.9 Emergency contact

Figure 3.4.10 Mock-up interface for viewing notification page

|  |  |
|--|--|
| <b>UC8: Emergency contact</b>  |  |
| <b>Goal:</b> End users can get contact information                           |  |
| <b>Level:</b> System   |  |
| <b>Actor:</b> End-users  |  |
| <b>Preconditions:</b> End users successfully log in                          |  |
| <b>Success Condition:</b> Users view a list of contact information           |  |
| <b>Failure Condition:</b> Users fail to view the list of contact information |  |
| <b>Trigger:</b> End-users click “emergency” button                           |  |
| <b>Success Scenario</b>  | <ol style="list-style-type: none"> <li>1. Users click on the “emergency” button</li> <li>2. End user select a hospital</li> <li>3. be available to contact information of staff</li> </ol> |
| <b>Extensions</b>  | -  |

## 3.5 Doctor Scope

### 3.5.1 Doctor 's use case specifications

The features granted to doctors enable them to log in/log out, enroll/drop and view personal units of study, manage/view personal information, manage/view personal timetable, view the learning materials, view announcement of school, view assignment and submit assignment. The following sections will discuss the use case of the primary actor of end-users.

### 3.5.1.1 Publish announcement

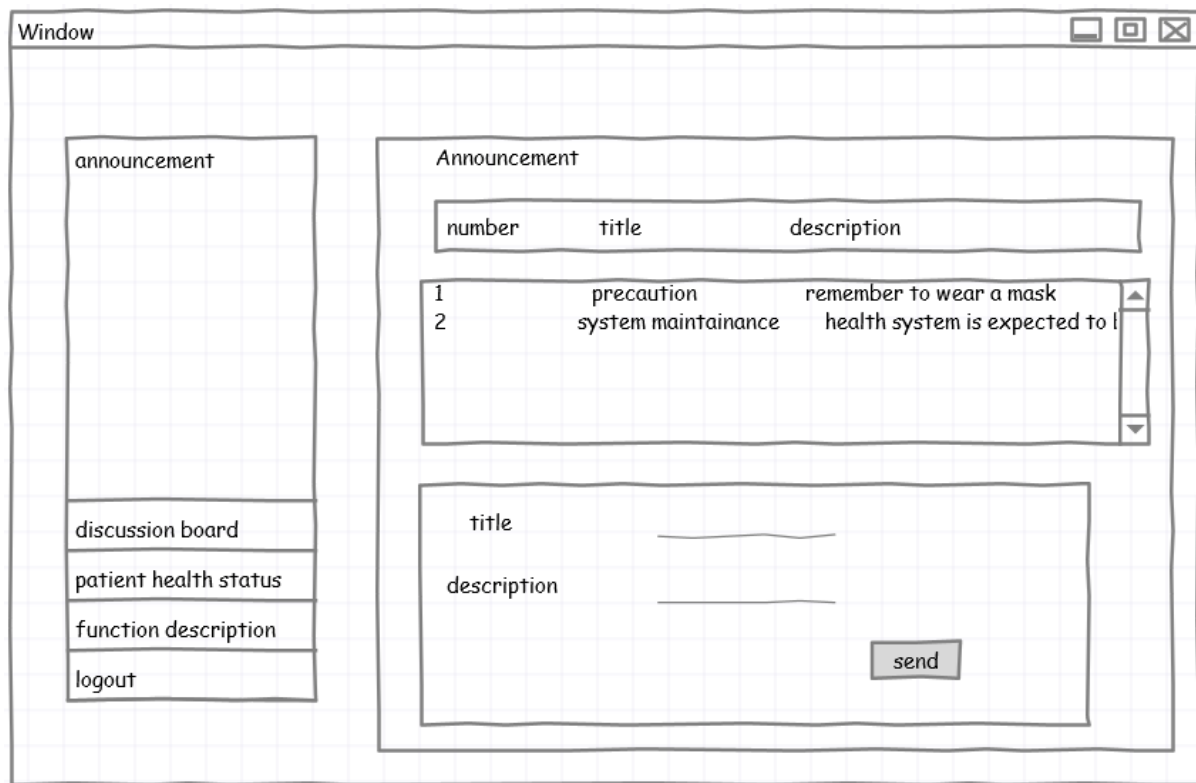

Figure 3.5.1 Mock-up interface for publishing notification page by doctors

|   |  |
|---|--|
| <b>UC11:</b> Publish announcement                               |  |
| <b>Goal:</b> Publish public information that all users can view |  |
| <b>Level:</b> System  |  |
| <b>Actor:</b> Doctor, technician                                |  |

## 4 Conclusion

In conclusion, this report introduces the design of HTA software applications' structure and functionalities through feature diagrams, class diagrams, use cases, activity diagrams and state chart diagrams. By using all these diagrams and methodology, it will help us to predict the details in the process of implementation stage. Through think about the logic and methods that will be used in the future, every group members had deep thought about the procedure of whole project, which is beneficial to our deep understanding for contents we have learnt in the lecture.

## 5 Group members contribution

| Requirements            | Contributor for each part |             |                      |                            |
|-------------------------|---------------------------|-------------|----------------------|----------------------------|
|                         | Zhiliang Wang             | Yuhao CHENG | Wujian GAO           | Xuan Huang                 |
